

Analysis of Transactional SMS Data

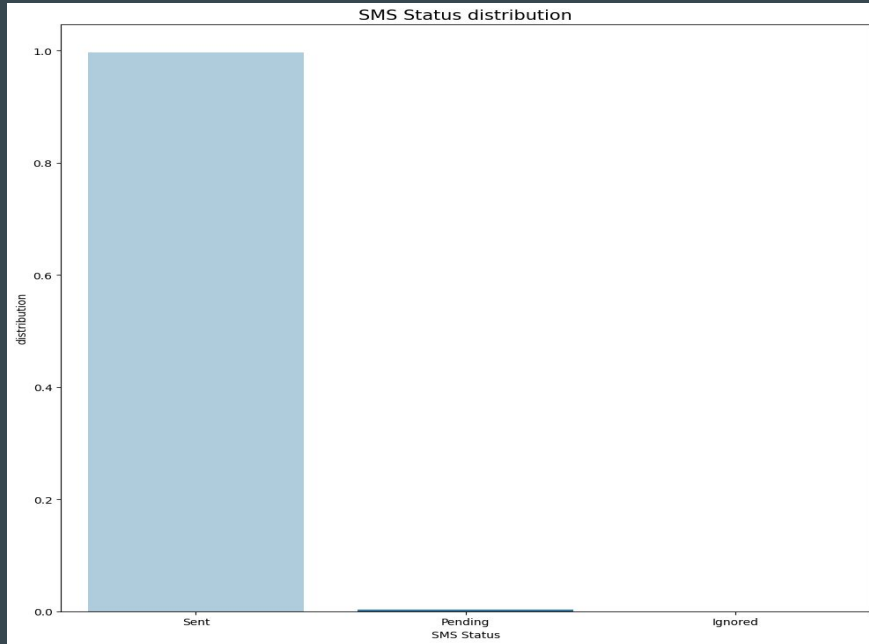

...

Tahsin Masruf

Overview

- ❑ Data analysis plays a crucial role in business applications and offers numerous benefits that can help organizations make informed decisions, optimize operations, and achieve their goals.
- ❑ In this presentation, I'll explore the findings from my in-depth analysis of the dataset, unveiling actionable insights that can significantly boost both business and application performance.

SMS Status Distribution

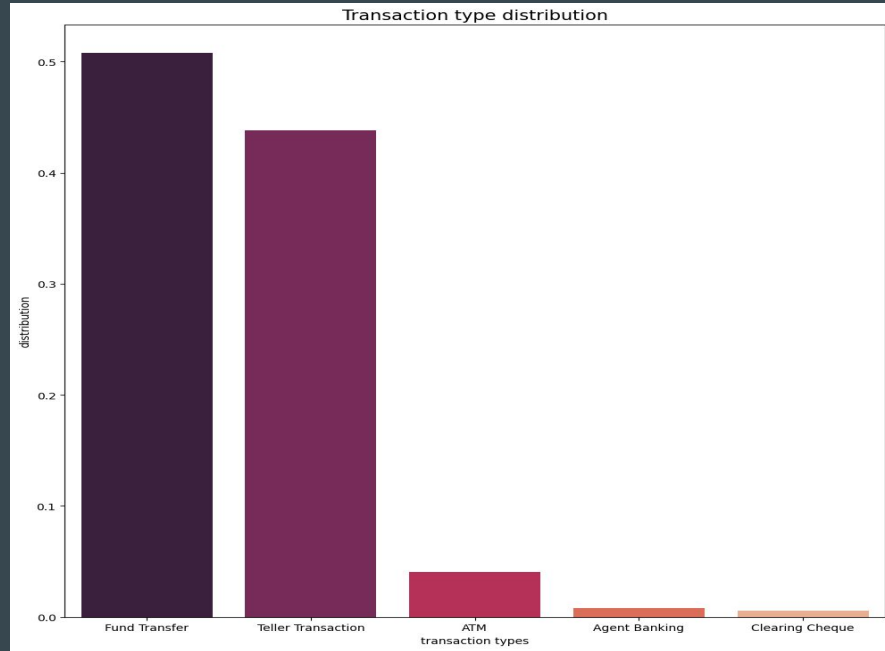

- ❖ Though Pending SMS rate is low but it should be check.

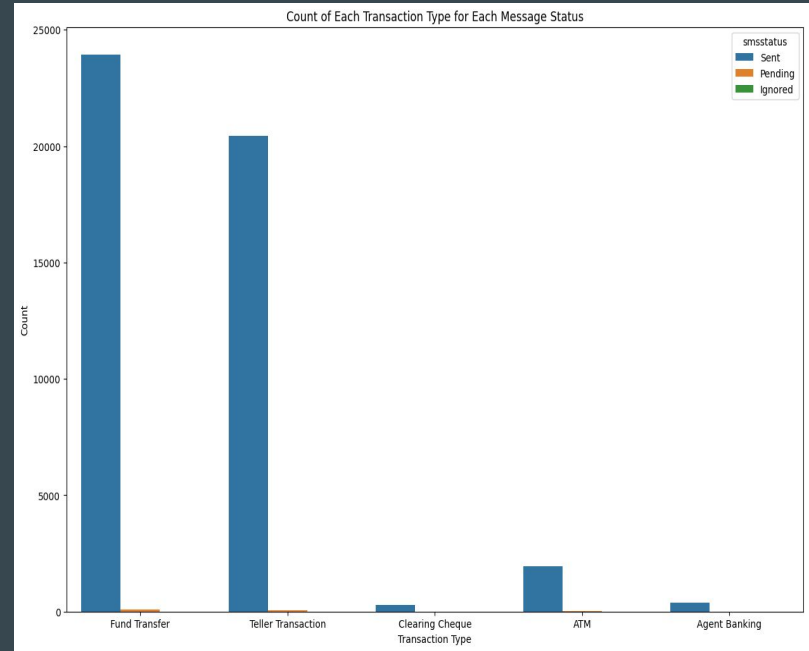

- ❖ Should check the application why these mobile operator's sms are pending.

Transaction Type

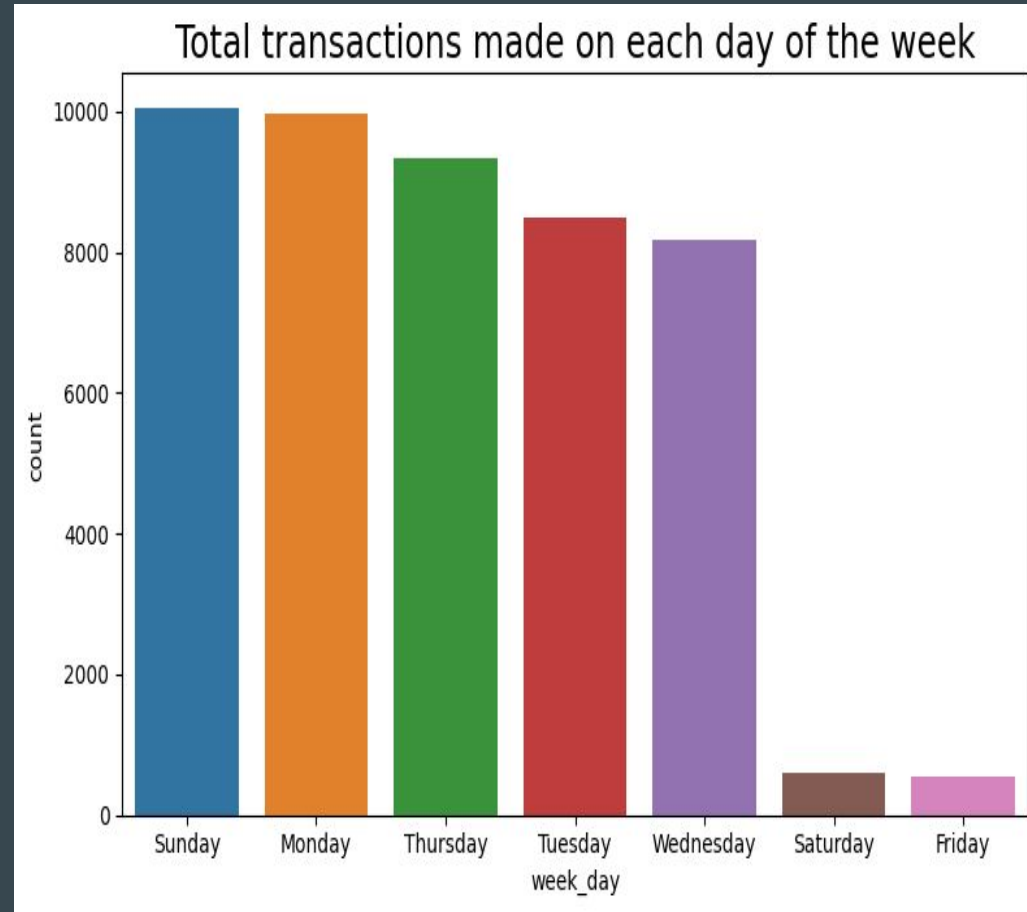

- ❖ Client request for Fund and Teller Transaction SMS are more frequently occurred.

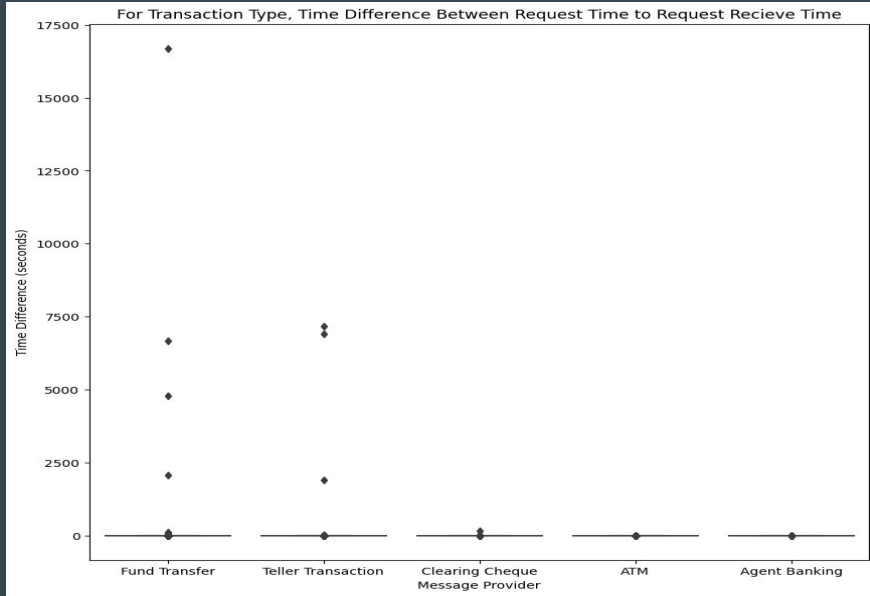

- ❖ We need to investigate on pending sms in the Fund and Teller transaction and make sure they are successfully sent to mobile operators.

Transaction on Each day

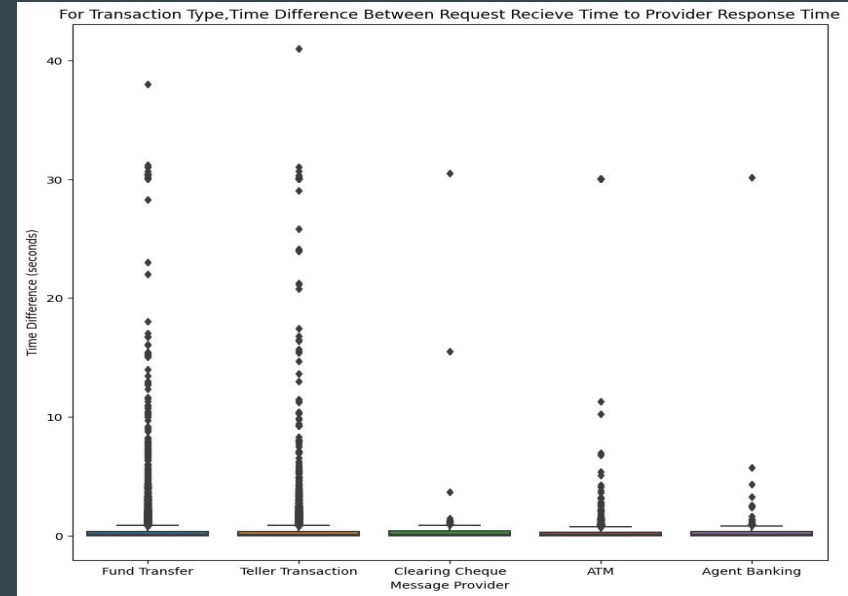

- ❖ Transactions are heavily occurred in these 5 days.
- ❖ The application should work properly in these days and application maintenance can be done in Friday and Saturday.

Application Performance on transaction

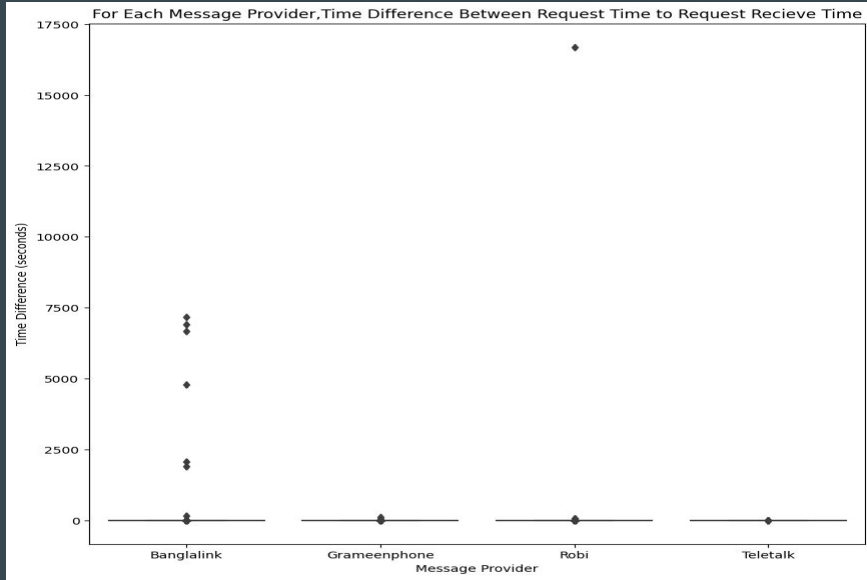

- ❖ For fund and Teller transaction, sometimes it takes much time to receive the provider request. Application performance needs to improve in these scenario.

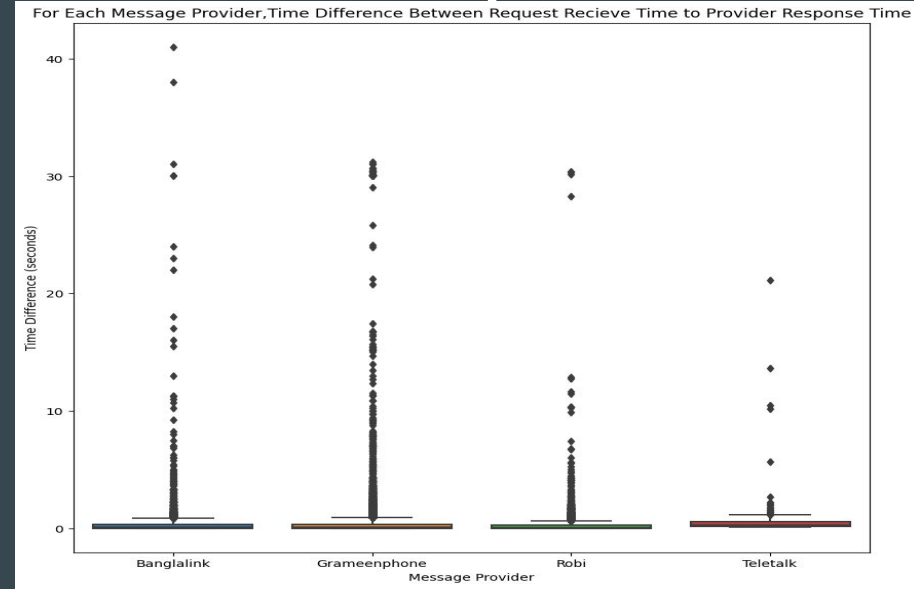

- ❖ Similar things found in request receive time to response time. Application needs to improve its performance responding client request.

Application Performance on Mobile Operators

- ❖ Clients request for Banglalink and Robi takes much time to receive in some cases. Need to find out the issue behind it.

- ❖ Application takes more time to response for every mobile operator. This indicates application have performance issue. This issue needs to fix soon as possible.

Transaction Type on Mobile Operators

- ❖ Grameenphone and Robi are top mobile operator for each type of transaction.
- ❖ Other mobile operator users should increase for business growing.

Thank You
